

AGWA toolbar, new delineation and .chm error

Posted by adamslb - 2009/01/05 15:17

Hello,

Thanks for putting together these AGWA - SWAT tutorials!

I am currently trying to run the San Pedro tutorial and have been unable to run a new delineation (#3 part 1 in directions). I can access the new delineation function, but within the delineation package, the "delineate" option selection is shaded out and unavailable (ie. see attached screen shot for visuals). Even after I input the output location, input grids and output identification, I am still unable to access the "delineate" function. I selected the "help" tab and received an error locating file message that says could not locate AGWA2.chm...any ideas what is going on?

there are a few other things I noticed when I was trying to run the program that I think may be contributing to this error - my toolbar is incomplete - it lacks some of the characters such as the LMCT and LEG acronyms I can see in the toolbar of the AGWA2 toolkit in the San Pedro tutorial directions. I have tried uninstalling and reinstalling everything I can think of - I did have some confusion with respect to downloading the installation files - are the MSI files something we download from the AGWA website or through our ArcGIS provider?

Basically, I am trying to run through this tutorial to become familiar with the SWAT interface - any insight about how to get my delineation moving is most appreciated. The other information I provided to hopefully provide insight into my problem and I am happy to provide more if that is helpful.

sincerely,
lauren

Hi Lauren,

Your installation is fine, you would have received an error message had anything gone wrong. The screenshots of acronyms/buttons on the toolbar are old; they've since been moved into the Other Options menu in the dropdown.

The MSI installer file is downloaded from the AGWA website. You've already downloaded and run it if you've installed AGWA.

Your screenshot wasn't included in your post so I can't say for certain, but if the Delineate button doesn't become enabled then AGWA doesn't think one of the requirements on the form has been satisfied. The requirements are workspace location, geodatabase name, DEM, FDG, and FACG grids selected in the comboboxes on their respective tabs, and the X, Y, and Snap Radius textboxes completed in the Outlet Identification box. I'm not sure if you left it out of your post or didn't do it on the form, but you don't mention having the geodatabase name filled out. That could be the problem right there.

Regarding the .CHM error. I hope that will be resolved in the next update, which should be later this

week or next.

Let me know if you get the problem solved or continue to have trouble.

Shea,

I'm getting that same 'error locating file agwa2.chm' as Lauren was. Can I assume you'll still be devising a fix so that the Help button will be able locate the 'AGWA 2.0 Documentation.chm' file in the Documentation folder? Thanks,
Rick.

Hi Rick,

Do you know what version of AGWA you are using or when you downloaded and installed it? I thought that issue was fixed, but perhaps it was only fixed in the most recent update which was for ArcGIS 9.3 only. If it does still exist in the versions for ArcGIS 9.2 and earlier (rather than existing in your case because of a non-current version of AGWA), then yes, the installers will be updated with the fix as well.

In any case, you should still be able to use the documentation in the .chm file, but you'll have to navigate manually to the appropriate sections rather than them opening automatically when you click on the help buttons. I guess I should ask, do you have the documentation downloaded and placed in the agwa2documentation folder?

Shea,

Thank you for your response. I'm using the 13/31/2008 build of AGWA2 for the ArcGIS 9.2 version that's mounted on my AGWA-run PC. I installed AGWA2 just last month. I can't really see a need to fix the documentation links in that non-current build, as my fix is just to keep the user's guide available in an open window; works fine for me. And yes, the .chm file is located in the documentation folder, as specified. Thanks,
Rick.
